

INFOR LN 10.7 MULTISITE SERIES • EBOOK 1 OF 5

Multisite Concepts & Activation

Foundation concepts, activation workflows, and core terminology for Infor LN 10.7 multisite operations

FullOnBaan

Comprehensive Infor ERP LN Training Programs

Ebook 1 of 5 | Infor LN 10.7 Multisite Series

Published: April 2026

Table of Contents

1. Chapter 1: Introduction to Multisite in Infor LN

- What Is Multisite?
- Why Multisite Matters
- Key Terminology
- When to Use vs Not Use Multisite
- Summary & Practice Exercise

2. Chapter 2: The Enterprise Model

- Company Structure: Logistic vs Financial
- Hierarchical Data Architecture
- How Data Cascades Through the Hierarchy
- Summary & Practice Exercise

3. Chapter 3: Multisite Concepts Activation Workbench

- The tcomm4600m000 Workbench
- Activation Statuses and Workflow
- Complete List of Multisite Concepts
- Dependency Map & Activation Sequence
- Step-by-Step Activation Flow
- Summary, Lessons Learned, Practice Exercise

4. Chapter 4: Activating the Sites Concept

- Prerequisites & Step-by-Step Flow
- Key Session: tcomm0150m000
- Post-Activation Verification
- Summary & Best Practices

5. Chapter 5: Data Levels in a Multisite Environment

- Global & Site-Level Data
- Warehouse/Department Data
- Use Global vs Site-Specific
- Data Inheritance Rules

6. Chapter 6: Item Data in Multisite Environments

- Global Item Master Data
- Items by Site (tcibd1550m000)
- Item-Ordering by Site (tcibd1560m000)
- Item-Costing by EU (ticpr0107m000)

7. Chapter 7: Migration and Site Activation for Existing Companies

- When You Need Site Activation
- Planning the Migration
- Pre-Migration Checklist
- Post-Migration Validation

8. Chapter 8: Configuration Flows and Process Walkthrough

End-to-End Multisite Setup Flow
Decision Tree for Choices
Sample 3-Site Configuration

9. Chapter 9: Best Practices and Common Pitfalls

Implementation Best Practices
Common Mistakes & Solutions
Real-World Lessons
Performance Considerations

10. Chapter 10: Session Reference Guide

Enterprise Management Sessions
Item Master Sessions
Planning Sessions
Costing Sessions
Warehouse/Inventory Sessions
Purchasing & Production Sessions

Chapter 1: Multisite Operations & Implementation

Section 1: Key Topic 1

Infor LN 10.7 Multisite provides comprehensive functionality for managing multiple operational locations within a single enterprise. The hierarchical structure ensures proper separation of logistic and financial flows. Sites represent operational locations while Enterprise Units handle financial consolidation. Understanding this separation is critical for successful implementation. The Use Global checkbox controls data inheritance, allowing sites to either inherit global settings or override with site-specific values. This flexibility enables organizations to balance standardization with local requirements. Planning clusters group sites for unified demand planning, optimizing inventory across the entire network. Supply source determines how items are fulfilled at each location.

Infor LN 10.7 Multisite provides comprehensive functionality for managing multiple operational locations within a single enterprise. The hierarchical structure ensures proper separation of logistic and financial flows. Sites represent operational locations while Enterprise Units handle financial consolidation. Understanding this separation is critical for successful implementation. The Use Global checkbox controls data inheritance, allowing sites to either inherit global settings or override with site-specific values. Understanding this separation is critical for successful implementation. The Use Global checkbox controls data inheritance, allowing sites to either inherit global settings or override with site-specific values. This flexibility enables organizations to balance standardization with local requirements. Planning clusters group sites for unified demand planning, optimizing inventory across the entire network. Supply source determines how items are fulfilled at each location.

Item	Global Setting	Site Override	Impact
Lead Time	14 days	7 days (DC)	Faster replenishment at DC
Supplier	ABC Corp	Regional Supplier	Local sourcing advantage
Safety Stock	100 units	50 units (DC)	Lower carrying cost
MTS/MTO	Make-to-Stock	Make-to-Order	Custom vs standard production
Warehouse	Primary	Receiving WH	Location-specific defaults

Best Practice: Document your Use Global strategy before implementation. Consistency across all item-by-site records prevents planning anomalies.

Section 2: Key Topic 2

Infor LN 10.7 Multisite provides comprehensive functionality for managing multiple operational locations within a single enterprise. The hierarchical structure ensures proper separation of logistic and financial flows. Sites represent operational locations while Enterprise Units handle financial consolidation. Understanding this separation is critical for successful implementation. Safety Stock	100 units	50 units (DC)	Lower carrying cost
MTS/MTO	Make-to-Stock	Make-to-Order	Custom vs standard production
Warehouse	Primary	Receiving WH	Location-specific defaults

Note: Once Sites concept is activated, warehouse assignments cannot change. Plan your site structure carefully during design phase.

Section 3: Key Topic 3
